Scott:

See lang. below that EPA cleared. The frog stuff is out. Does this work with you?

“Although it is difficult to predict the magnitude and duration of these impacts on juvenile salmon because the extent of salmonid effects often depend on the interaction with many different parameters (e.g., availability of alternative food sources, water temperature, and other abiotic factors), NMFS has found that some herbicides used in aerial application over non-fish bearing streams present risks to salmonids protected by Oregon water quality standards and the habitat necessary for life stages protected by those standards.” [FN citing NMFS BiOp]
